

Please Take Part in Gulf Coast Seaweed Survey

So through my sustainability studies at Texas State University, master's program, I've been recruited to help finish some research that will be published; survey marketing project that is reviewing "the marketability of a seaweed-based compost as a "boutique" compost. The seaweed is an invasive species on the Gulf Coast. " We need 250 more surveys of gardeners who just look at samples of the compost. We need 10 people to actually try gardening with the compost & do interviews later. Anyone interested in taking a seaweed survey for your garden? I am in the Central Texas area doing this research. Please sign up on my site if you are interested in participating in this study.

If you would like to read more about the impact of the latest news on the **Gulf of Mexico Research Initiative** check out the article listed to the featured picture; What Lies Beneath: Scientists Study Seaweed to Understand Gulf Oil Impacts.

Sustainable Start

After much ado were off and running. Today marked the first day of the website and my fourth time showing at the Manor Farmers Market. Wednesdays are always a pleasure! The site is under quite a bit of development however I will continue to work on it regularly so that it can meet my standards and hopefully yours too! I will work on posting pictures, videos, projects, and useful blogs asap. I hope you are enjoying your journey through life and allow me to be a part of it! Please check back soon to see what creativity has inspired! Happy Thursday!
